Title: OPERATION: D-ELITE				
Synopsis: Set leads to prewarrants and interviews on Property Rights Theft inves	04/27/2	005 related		
Details: The FBI received Association of America (MPA				

with a complete copy of the data logs from the ET tracker which collected the login names, IP addresses, and other piracy transaction information from its members. The logs included information on individuals in the United States including three high level system administrators of ET, eleven individuals who are identified and credited as being the original Uploaders of copyrighted material to the organization, and numerous individuals who are identified as being leachers/seeders of the organization, those who obtained the copyrighted material and allowed it to be uploaded from their computer system to other users.

stated they began an investigation of the Elite Torrents (ET)

organization, an illegal online piracy group.

Leachers are individuals who are sharing a file but do not have a full copy of the movie/program/game they are downloading. Seeders are individuals who have obtained 100% of the item they are downloading, and are now providing it to the other members. Uploaders are individuals who have been given the responsibility to obtain new material for the organization, create the torrent files, and share the files with the other members.

In the early 1990s, computer hackers and other individuals organized themselves into various international groups that became an underground Internet society known as the "warez scene." The leading warez groups compete against each other to attain the reputation as the fastest provider of high-quality pirated computer software, including utility and application software, console games, and movies. These warez groups specialize in being the first to release new pirated software to the warez community for unauthorized reproduction and distribution worldwide.

The new mainstream technology and terminology quickly replacing the "warez" underworld is known as "BitTorrent" which has been touted by computer experts as one of the the biggest advances in Internet technology. BitTorrent was introduced as a program that allowed computer users to share and swap files, specifically music and movies, through a centralized file server. Preparing new pirated movies, music, games and software for release and distribution to the BitTorrent scene generally requires a number of different steps. Mechanically, files shared over a BitTorrent system are broken down into separate parts that are separately shared. A user downloading over a BitTorrent network will begin sharing the parts of a file as he acquires them, which is even before he has acquired all of the parts of the larger file. The BitTorrent system is designed so that users will obtain the missing parts of the files they are acquiring faster if they upload the parts they acquire simultaneously as they download and acquire them. This combination of partialsharing and tit-for-tat techniques generally results, especially for larger files such as movies, in BitTorrent providing faster downloads than competing peer-to-peer file transfer systems.

There are two types of programs that comprise the BitTorrent system: "clients" and "trackers." Clients are programs that users run to download and upload files. Trackers are programs that certain motivated parties run to tell the clients where they can located the files they want. This file-location service is critical to the functioning of the BitTorrent system. A tracker tracks clients and maintains a list, or index,

of which clients are online sharing which files. Trackers do not store or relay the files themselves, but instead introduce clients to one another to make file sharing by individuals easier. A client communicates with a tracker to ask it for the Internet Protocol (IP) addresses of clients sharing the file that the client wishes to download. The client then automatically communicates directly with those other clients to download the desired file from them.

The BitTorrent system enables users to download many types of files, including movies, music, and software, which are called "content" files. In order to download a content file with BitTorrent, a user must first find and download an associated "torrent" file. Torrent files contain the information BitTorrent clients need to download associated content files. Namely, a torrent file includes the address of a tracker, the name of a content file, the size of the content file, the size of the parts into which the file is divided, and unique file identifiers for each part. Torrent files are small files that essentially tell one computer where and how to get a content file directly from another computer.

The key philosophy of BitTorrent is that users should upload (transmit outbound) at the same time they are downloading (receiving inbound.) In this manner, network bandwidth is utilized as efficiently as possible. BitTorrent is designed to work better as the number of people interested in a certain file increases, in contrast to other file transfer protocols. To date, it is the fasted way to download music and movies, illegally, on the Internet.

This is a joint investigation with the San Diego Computer and Technology Crime High-Tech (CATCH) Response Team, and the US Department of Immigration and Customs Enforcement (ICE). Local Agents from ICE will be contacting the recipients of this EC to assist in the preparation and execution of the search warrants. If it is determined that the subject of the lead is not in the Division being notified, an EC will be generated to inform the affected Division.

A draft affidavit is being prepared and will be forwarded electronically to the separate divisions in preparation for the coordinated search warrants. Separate from the affidavit, an excel spread sheet listing subject information and the initial target information packet provided by the MPAA will be forwarded to the lead Agent. Closer to the time of the search warrant, questions to ask the subject during the interview will be prepared and provided to each Division. It is anticipated that numerous computer systems or large storage configurations

may be found at the search locations due to the number of files and volume of data each subject has downloaded or allowed to be uploaded from their computer system.

The planned execution date for the coordinated search warrants is scheduled for 04/27/2005. Surveillance of the targets daily routine will assist in the coordination for serving of the warrants. Please report pertinent information to Case Agent.

090 KSO 2, EC

Synopsis: To advise CYBER-IPRU of San Diego Divisions inability to investigate the Warez Peer-to-Peer Website referral based on the pending major takedown involving a significant Bit Torrent trafficking organization.

Reference: 66F-HQ-A1451247 Serial 126 dated 01/10/2005.

Details: Shortly after receiving the above referenced lead involving an RIAA Warez Peer-to-Peer (P2P) referral, the Motion Picture Association of America (MPAA) provided information on a piracy organization, Elite Torrents (ET), which is believed to be providing material to individuals associated with the Warez P2P network. While the Warez P2P network trades in songs and videos, the organization the MPAA identified trades in software and full movie DVD and theatrical releases.

The MPAA provided transaction logs for a Bit Torrent tracker website, www.elitetorrents.com, which identified by IP address, individuals who were transfering copyrighted material. An investigation was opened to identify potential targets of the ET organization, which includes over 125,000 members from around the world. This takedown will involve approximately 21 search warrants executed in 12 Divisions targeting Administrators, Uploaders and File Traffickers. The takedown will be one of the first major efforts by law enforcement to dismantle a Bit Torrent organization. The knowledge gained from the ET investigation will be utilized to initiate a Group II operation targeting additional Bit Torrent traffickers, Uploaders and Site Administrators.

To:

Cyber From: San Diego 66F-HQ-A1451247, 03/31/2005 Re:

Regretfully, San Diego is not in a position to investigate the Warez P2P website at this time due to manpower limitations given the pending major takedown, and considers the lead covered.

b7C b7D conducted the Special Agent (SA) following investigative activity: On 03/16/2005, received a telephone call from concernina the two hard drives from the Elite Torrent (ET) tracker server. stated that he would be shipping the drives to SA for evidence, as directed by Worldwide Enforcement, Motion Picture Association of America (MPAA), On 3/17/2005, SA received a UPS box from which contained two 20GB hard drives. Included with the hard drives was the original United States Postal Service (USPS) shipping labels from letter which stated that he received the drives The two hard drives were then entered into FBI évidence. The packing labels from the USPS box, and the letter from will be maintained in the 1A section of the file in an FD-340 envelope. On 03/21/2005, SA provided the two hard drives to the Regional Computer Forensic Laboratory (RCFL), and requested they be imaged, and an image of the drives be provided to the Case Agent for forensic review. The RCFL case number assigned to this investigation is 05-0100, and the request for imaging the drives is 05-0100-A-01.

In planning this operation with the US Department of Immigration and Customs Enforcement (ICE), I am requesting that each Division reach out to the local ICE Special Agent assigned to assist, and utilize the Agent in the planning and preparation for the search warrant. The local ICE Agent will receive the name and number of the FBI Agent assigned this lead so that they may coordinate efforts. A future joint Group II operation between the FBI and ICE will be based on the coordination and cooperation between the different agencies in the different divisions.

A draft affidavit is being prepared and will be forwarded electronically to the separate divisions in preparation for the coordinated search warrants. Separate from the affidavit, an excel spread sheet listing subject information, the initial target information packet provided by the MPAA, and a user analyses from the web tracker will be forwarded to the lead Agent. All of these items will be sent by 04/29/2005 via Buemail. Closer to the time of the search warrant, questions to ask the subjects during the interview will be prepared and provided to each Division. It is anticipated that numerous computer systems or large storage configurations may be found at the search locations due to the number of files and volume of data each subject has downloaded or allowed to be uploaded from their computer system.

The planned execution date for the coordinated search warrants is scheduled for 05/25/2005. Surveillance of the targets daily routine will assist in the coordination for serving of the warrants. Please report pertinent information to Case Agent.

File-swapping Web site shut down

Movie piracy

Federal agents shut down a Web site that they say allowed people to download movies and other copyright material free: **Business**, **C1**

Elite Torrents raided in digital-piracy probe

By Jonathan Sidener STAFF WRITER

Last week, federal investigators in San Diego watched as "Star Wars: Episode III — Revenge of the Sith," turned up on a prominent file-sharing

Web site several hours before the movie opened in theaters. And they counted as more than 10,000 visitors downloaded illegal copies of the movie in 24 hours.

Then yesterday, the U.S. Justice Department responded with what could be called "Revenge of the Copyright Holders," serving search warrants in 10 cities against suspected administrators of the Web site,

Elite Torrents. No arrests were made; however, the site was shut down.

Investigators here say they have the names of nearly 140,000 Elite Torrent users. But prosecutors aren't saying whether those rank-and-file participants could face charges.

The raids mark an escalation in the battle against illegal movie and music sharing. Unlike the more reIndicate page, newspaper, city, state:

Ten

strained response to Napster and Ka Zaa and other preceding technologies, authorities are launching criminal investigations to tackle the newly dominant file-sharing technology, BitTorrent.

And Justice Department officials in Washington turned to San Diego investigators to crack the case.

see Web, C5

≫WEB

CONTINUED FROM PAGE C1

New BitTorrent technology is targeted

The battle against earlier file-sharing networks such as Napster and San Diego's MP3.com was fought primarily through civil suits filed by the recording and movie industries. Then BitTorrent came along with a technology that speeds the process of sharing movies and music files. By some estimates, BitTorrent file transfers account for up to 30 percent of all Internet traffic, with the vast majority of transfers assumed to be of copyrighted material.

At the same time BitTorrent was growing in popularity, the Justice Department became increasingly aggressive against

digital piracy.

"When we have a technology that speeds up the process like this, we have a little more sense of urgency," department spokesman Bryan Sierra said:

Sierra said yesterday's raids focused on the leaders of the prominent BitTorrent site. He declined to comment on the fate of the thousands of site visitors who were identified through the investigation.

"Intellectual property theft is illegal," he said. "A crime is a crime. People who use the Internet need to be aware of criminal activity and proceed

with caution."

Like other so-called peer-topeer networks, BitTorrent allows users to transfer files back and forth with other users. Unlike previous networks, BitTorrent does not transfer a file directly between two users. Instead, it sends multiple pieces of a file from several users to a single recipient, which speeds the process. Because the files are not stored on any centralized servers, it is difficult to stop through legal action. But individuals sharing files can be identified and sued or prosecuted.

Elite Torrent was one of thousands of sites that provide downloads of BitTorrent software and help users search for files being shared by other users.

But Motion Picture Association of America investigators singled out the site as one of the first to provide pre-release movies such as "Revenge of the Sith," said Jim Sevel, San Diego superintendent of cybercrime investigations for the Department of Homeland Security's Immigration and Customs Enforcement agency.

The MPAA took its information to the Justice Department in February, and the case was referred to San Diego, Sevel

said.

In addition to federal cyberinvestigators, San Diego has the Cor puter and Technology Crime ligh Tech Response Team, o CATCH, which is led by the San Diego County District Attorney's Office and includes local, state and federal law enforcement agencies.

One investigator from Sevel's office, an FBI agent and several CATCH members worked on the case, Sevel said.

"Elite Torrents was a very prominent site," he said. "They were among the first to have pre-release movies, which means they were close to the source of the theft."

He said that administrators of the site were each sharing up to 30 terabytes of pirated material. A terabyte is roughly 1,000

gigabytes.

The group's Web site, Elite-Torrents.org, was essentially shut down yesterday. Justice Department officials redirected Web traffic to a new page that announced the site had been closed by the FBI.

"Individuals involved in the operation and use of the Elite Torrents network are under investigation for criminal copyright infringement," the replacement page said.

Search warrants were served in Arizona, Illinois, Kansas, Ohio, Pennsylvania, Texas, Virginia and Wisconsin. The actual site was stored on servers in Sweden, Sevel said. Customs agents are working with Swedish investigators to pursue the case, he said.

Because Internet crimes are often international, cybercases are considered to be without boundaries and are often referred to the U.S. Customs Enforcement agency.

Sevel said that as part of the investigation, he viewed some of "Revenge of the Sith," but not enough to spoil the plot.

"I went out and paid \$9.50 to see it in a theater," he said.

on the internet. computer to check his e-mail. passwords nor usernames for his laptop and desktop to get does not use
stated the same IP address is used for all computers in the house to include his laptop.
advised only he and
use his laptop. advised uses his desktop to check E-Bay auctions. When asked about usage of the desktop, stated he accounts for "99.9%" of its use.
advised he uses his computers at various times during the day depending on school and work. advised he uses his laptop a lot at work. works several late night/early morning shifts.
When the reporting Agent asked about online accounts, responded by stating "where do I start?" advised he has one account at a lot of different places. stated a lot of accounts will be found on his computer.
within ET. uses the nick-name and uses the nick-name
believed there are eight administrators in ET. stated he talks with all of the upper level moderators and administrators.
stated all of the uploaders in ET have dedicated servers they use to upload content.
advised he uses approximately 100 other P2P networks but does not hold any positions within them. stated he obtains his content he uploads to ET from other torrent sites. stated torrentbytes.net is the site where he can obtain content the quickest. could not recall the names of any other sites. mostly associates with ET.
did not know any of the true names of ET members. Depending on who the other person is, would communicate with them through IRC Instant Messenger.

Continuation of FD-302 of	
The only FTP sites operates either directly or remotely are individual users who have FTP set up. On the reporting Agents notebook, wrote the names of FTP sites he had access to: advised the sites.dat files would be on his computer.	
stated he has not allowed anyone else to utilize his username and password on any P2P site.	
advised he connects directly to his P2P and FTP sites. does not use shells nor bouncers.	
stated he frequents the efnet server. Once he gets in this server, he gets hundreds of servers/channels to include: elitetorrents, etuploaders, et-mods, etstaff, etreleases, and etsupport.	
advised he is willing to do whatever he can to help the FBI and ICE in future and current investigations. stated he has other P2P/torrent sites in his bookmarks.	
stated he uses as his login and password to access other torrent sites.	
advised he stays logged in all the time to ET IRC chat rooms on both his desktop and laptop.	
stated he has been obtaining copyrighted content for the last 4 to 5 years. got involved in ET when he stumbled across the site. talked to the owner of the site and soon was promoted to moderator. was promoted again and now makes decisions such as promotions for ET. stated promotions are usually based on rapport and involvement in the group.	
believed there are 100,000 active members of ET. stated someone who lives in and attends is a user within ET. did not know this individual's name.	
originally advised he obtained Star Wars III: Revenge of the Sith three minutes after it was released to the public. later stated he obtained it three hours before it was released to the public.

U.S. Cracks Down on Internet Piracy

A P Associated Press

By MARK SHERMAN, Associated Press Writer 9 minutes ago

The government announced an 11-nation crackdown Thursday on Internet piracy organizations responsible for stealing copies of the latest Star Wars film and other movies, games and software programs worth at least \$50 million.

FBI agents and investigators in the other nations conducted 90 searches starting Wednesday, arresting four people, seizing hundreds of computers and shutting down at least eight major online distribution servers for pirated works.

The Justice Department "is striking at the top of the copyright piracy supply chain — a distribution chain that provides the vast majority of illegal digital content now available online," Attorney General Alberto Gonzales said.

Called Operation Site Down, the crackdown involved undercover FBI operations run out of Chicago, San Francisco and Charlotte, N.C., and involved help from authorities in Australia, Belgium, Canada, Denmark, France, Germany, Israel, the Netherlands, Portugal and the United Kingdom.

Among those arrested was Chirayu Patel of Fremont, Calif., on charges of violating federal copyright protection laws. Patel is alleged to be a member of a "warez" group, a kind of underground Internet co-op that is set up to trade in copyrighted materials.

Warez (pronounced "wares") groups are extraordinarily difficult to infiltrate because users talk only in encrypted chat rooms, their computer servers require passwords and many are located overseas, the FBI has said.

The investigations targeted "release groups" that are the original sources of pirated works that can be distributed worldwide in hours. Among the warez groups targeted are RiSCISO, Myth, TDA, LND, Goodfellaz, Hoodlum, Vengeance, Centropy, Wasted Time, Paranoid, Corrupt, Gamerz, AdmitONE, Hellbound, KGS, BBX, KHG, NOX, NFR, CDZ, TUN and BHP.

Those groups are believed responside for stealing and distributing copyrighted works including films "Star War Episode III: Revenge of the Sith," and "Mr. and Mrs. Smith," and Autodesk's Autocad 2006 and Adobe's Photoshop software.

Warez groups differ from popular file-swapping networks, where millions of files are shared without precautions to limit access.

Last month, authorities shut down a popular Web site that facilitated the downloading of movies and other materials. Investigators said many of the copyright movies were available through the Elite Torrents site even before their commercial release. No arrests were announced at the time.

President Bush signed a new law last month setting tough penalties of up to 10 years in prison for anyone caught distributing a movie or song before its commercial release.
