

If you're at a blackjack table you are NOT allowed to use a phone or electronic device. So either don't have it with you... or don't use it... or if it rings excuse yourself politely and walk a foot away from the table.

You ARE allowed to use those little cards (available freely if you ask) that tell you on what to hit or stand or double or stuff.

Don't be tempted to play "single-deck 21." Sure, it may sound like better odds except for

- you don't get to see any cards other than your own
- they shuffle before playing half the deck
- blackjack pays 6:5 not 3:2
